

These are actual medical warnings about the non-prescription pain killer ibuprofen.

People who take nonsteroidal anti-inflammatory drugs (NSAIDs) (other than aspirin) such as ibuprofen may have a higher risk of having a heart attack or a stroke than people who do not take these medications.

Some side effects can be serious. If you experience any of the following symptoms, or those mentioned in the IMPORTANT WARNING section, call your doctor immediately. Do not take any more ibuprofen until you speak to your doctor.

unexplained weight gain  
shortness of breath or difficulty breathing  
swelling of the abdomen, feet, ankles, or lower legs  
fever  
blisters  
rash  
itching  
hives  
swelling of the eyes, face, throat, arms, or hands  
difficulty breathing or swallowing  
hoarseness  
excessive tiredness  
pain in the upper right part of the stomach  
nausea  
loss of appetite  
yellowing of the skin or eyes  
flu-like symptoms  
pale skin  
fast heartbeat  
cloudy, discolored, or bloody urine  
back pain  
difficult or painful urination  
red or painful eyes  
stiff neck  
headache  
confusion  
aggression

# And some people say *cannabis* is dangerous!

*If you experience any of the following symptoms,  
stop taking ibuprofen and call your doctor: stomach pain, heartburn,  
vomit that is bloody or looks like coffee grounds, blood in the stool,  
or black and tarry stools.*
